

AgriPro Brand Wheat Variety

# AP Bigfoot

## Dryland Durability

Pedigree: TAM112 / CO04393 // SY Wolf

### Key Strengths

- » Consistently good western dryland yield performance
- » Excellent test weight
- » Very good wheat streak mosaic virus tolerance

Call your AgriPro® Associate for local performance data and seed availability.

A complete listing of AgriPro Associates is available at [AgriProWheat.com](http://AgriProWheat.com).

### Agronomics

Type .....	Hard Red Winter
Head Type .....	Awned
Seed Size .....	Medium
Chaff Color .....	White
Herbicide Tolerance.....	None
Test Weight .....	Excellent
Straw Strength .....	Excellent
Relative Maturity.....	Early
Plant Height.....	Short
Winter Hardiness .....	Very Good
Acid Soil Tolerance .....	Very Good
Coleoptile Length .....	Medium
Tillering .....	Very Good
Milling & Baking Quality ...	Acceptable
Protein .....	Good

Ratings may vary across area of adaptation.

### Disease and Pest Tolerance

Leaf Rust .....	Excellent
Stripe Rust.....	Fair
Stem Rust.....	Excellent
Wheat Streak Mosaic Virus ..	Very Good
Barley Yellow Dwarf Virus.....	Good
Soil-Born Mosaic Virus.....	Good
Leaf Blotch .....	Very Good
Tan Spot .....	Good
Powdery Mildew .....	NA
Hessian Fly .....	Poor
Fusarium Head Blight.....	Fair

### Variety Protection

PVP..... Protected

*Seed trading and resale by any unauthorized party is strictly prohibited by law.*

### Management Notes

AP Bigfoot is a broadly adapted, early maturing, moderately short winter wheat. Its outstanding yield record in western performance trials demonstrates excellent drought tolerance. A great choice where wheat streak mosaic virus is a problem, but remain diligent in controlling volunteer wheat. Tolerance to stripe rust was reduced by the 2024 race change. A fungicide application at flag leaf is now encouraged. Farmers operating double-crop management systems find AP Bigfoot's early maturity advantageous for timely planting of a subsequent crop.

**Note:** these agronomic assessments are updated annually by Syngenta scientists. The current values reflect each variety's relative performance within these characteristics through the 2024 crop year. Specific conditions may cause variations. These relative protection values are based on current pest and disease populations, known to shift periodically potentially changing specific evaluations. Resistance to many other diseases and pests is sensitive to environmental conditions, plant development stages and the presence and intensity of other diseases which may result in specific evaluation inconsistencies.
