
AgriPro Brand Wheat Variety

AP Prolific

Yield Performance with FHB Tolerance

Pedigree: Everest / APH09T9506

Key Strengths

- **Best-in-class fusarium head blight (scab) tolerance**
- **Exceptional yield performance**
- **High tillering**

Call your AgriPro® Associate for local performance data and seed availability.

Agronomics

Type	Hard Red Winter
Head Type	Awned
Seed Size	Medium
Chaff Color	White
Herbicide Tolerance	None
Test Weight	Excellent
Straw Strength	Good
Relative Maturity	Medium
Plant Height	Medium
Winter Hardiness	Very Good
Acid Soil Tolerance	Excellent
Coleoptile Length	Long
Tillering	Excellent
Milling & Baking Quality	Acceptable
Protein	Good

Ratings may vary across area of adaptation.

Disease and Pest Tolerance

Leaf Rust	Excellent
Stripe Rust	Good
Stem Rust	Excellent
Wheat Streak Mosaic Virus	Very Good
Barley Yellow Dwarf Virus	Very Good
Soil-Born Mosaic Virus	Excellent
Leaf Blotch	Very Good
Tan Spot	Very Good
Powdery Mildew	NA
Hessian Fly	Poor
Fusarium Head Blight	Very Good

Variety Protection

PVP ..... Protected

Seed trading and resale by any unauthorized party is strictly prohibited by law.

Management Notes

AP Prolific is a farmer favorite across the central plains. Producers are enjoying top-end yield performance with disease and pest tolerances ideally suited to the region. Named for its prolific tillering, AP Prolific is an excellent dual-purpose wheat. When planting on time into ideal soil conditions, slightly reduced seeding rates have not hindered yield. Best-in-class fusarium head blight tolerance, excellent for those with corn in the crop rotation. Tolerance to stripe rust remains good, but was reduced by the 2024 race change. A fungicide application at flag leaf is encouraged.

Yield Data

Note: these agronomic assessments are updated annually by Syngenta scientists. The current values reflect each variety's relative performance within these characteristics through the 2024 crop year. Specific conditions may cause variations. These relative protection values are based on current pest and disease populations, known to shift periodically potentially changing specific evaluations. Resistance to many other diseases and pests is sensitive to environmental conditions, plant development stages and the presence and intensity of other diseases which may result in specific evaluation inconsistencies.
