

AgriPro Brand Wheat Variety

AP Roadrunner

Durable Dual Purpose

Pedigree: Jackpot / Duster

Key Strengths

- » Ideal for graze and grain management systems
- » Very good Hessian fly tolerance
- » Excellent stripe rust tolerance

Agronomics

Type	Hard Red Winter
Head Type	Awned
Seed Size	Medium
Chaff Color	White
Herbicide Tolerance.....	None
Test Weight	Very Good
Straw Strength	Good
Relative Maturity.....	Late
Plant Height.....	Medium
Winter Hardiness	Very Good
Acid Soil Tolerance	Excellent
Coleoptile Length	Medium
Tillering	Excellent
Milling & Baking Quality ...	Excellent
Protein	Good

Ratings may vary across area of adaptation.

Disease and Pest Tolerance

Leaf Rust	Excellent
Stripe Rust.....	Excellent
Stem Rust.....	Poor
Wheat Streak Mosaic Virus ..	Very Good
Barley Yellow Dwarf Virus.....	Very Good
Soil-Born Mosaic Virus.....	Excellent
Leaf Blotch	Fair
Tan Spot	Fair
Powdery Mildew	Excellent
Hessian Fly	Very Good
Fusarium Head Blight.....	Fair

Variety Protection

PVP..... Protected

Seed trading and resale by any unauthorized party is strictly prohibited by law.

Management Notes

AP Roadrunner is a later maturing winter wheat well suited for dual-purpose management systems. Tolerance to leaf and stripe rust has remained excellent despite the recent rust race changes. Although occurrence is rare, it is susceptible to stem rust. AP Roadrunner is an excellent choice for farmers struggling with Hessian fly. AP Roadrunner is tough and performs well even on marginal crop ground characterized by sandy, drought prone, low organic matter, low pH soils.

Yield Data

Note: these agronomic assessments are updated annually by Syngenta scientists. The current values reflect each variety's relative performance within these characteristics through the 2024 crop year. Specific conditions may cause variations. These relative protection values are based on current pest and disease populations, known to shift periodically potentially changing specific evaluations. Resistance to many other diseases and pests is sensitive to environmental conditions, plant development stages and the presence and intensity of other diseases which may result in specific evaluation inconsistencies.
