

AgriPro Brand Wheat Variety

AP24 AX

Peak Production Protected

Pedigree: AF10 / 2*Byrd // AF26 / Byrd

Key Strengths

- » Aggressor® herbicide tolerance for control of winter annual grasses
- » Exceptional yield performance
- » Very good wheat streak mosaic virus tolerance

Call your AgriPro® Associate for local performance data and seed availability.

A complete listing of AgriPro Associates is available at AgriProWheat.com.

Agronomics

Type	Hard Red Winter
Head Type	Awned
Seed Size	Medium
Chaff Color	White
Herbicide Tolerance.....	Aggressor
Test Weight	Very Good
Straw Strength	Good
Relative Maturity.....	Medium
Plant Height.....	Medium
Winter Hardiness	Very Good
Acid Soil Tolerance.....	Fair
Coleoptile Length	Long
Tillering	Very Good
Milling & Baking Quality ...	Acceptable
Protein	Fair

Ratings may vary across area of adaptation.

Disease and Pest Tolerance

Leaf Rust	Fair
Stripe Rust.....	Very Good
Stem Rust.....	Very Good
Wheat Streak Mosaic Virus ..	Very Good
Barley Yellow Dwarf Virus.....	NA
Soil-Born Mosaic Virus.....	Good
Leaf Blotch	Very Good
Tan Spot	Good
Powdery Mildew.....	NA
Hessian Fly	Good
Fusarium Head Blight.....	Poor

Variety Protection

PVP.....	Protected
Stewardship Agreement.....	Required

Management Notes

AP24 AX is a CoAXium® wheat with improved tolerance to Aggressor herbicide. Agronomic and disease tolerances are similar to AP18 AX. A close comparison will show AP24 AX to be slightly later in maturity and slightly taller in height, but still well within a medium classification for both. Use caution on low pH soils that may have toxic levels of plant-available aluminum. Aluminum toxicity can often be overcome by applying a phosphorus starter fertilizer. Like all CoAXium wheats, producers are prohibited from saving seed and a stewardship agreement must be signed prior to purchase.

Yield Data

Note: these agronomic assessments are updated annually by Syngenta scientists. The current values reflect each variety's relative performance within these characteristics through the 2024 crop year. Specific conditions may cause variations. These relative protection values are based on current pest and disease populations, known to shift periodically potentially changing specific evaluations. Resistance to many other diseases and pests is sensitive to environmental conditions, plant development stages and the presence and intensity of other diseases which may result in specific evaluation inconsistencies.
