

AgriPro Brand Wheat Variety

# SY Wolverine

## Versatile Performance

Pedigree: Everest / Platte // SY Wolf

### Key Strengths

- » Outstanding performance across management systems
- » Excellent straw strength
- » Very good wheat streak mosaic virus tolerance

Call your AgriPro® Associate for local performance data and seed availability.

A complete listing of AgriPro Associates is available at [AgriProWheat.com](http://AgriProWheat.com).

### Agronomics

Type .....	Hard Red Winter
Head Type .....	Awned
Seed Size .....	Medium
Chaff Color .....	White
Herbicide Tolerance.....	None
Test Weight .....	Excellent
Straw Strength .....	Excellent
Relative Maturity.....	Early
Plant Height.....	Short
Winter Hardiness .....	Very Good
Acid Soil Tolerance .....	Poor
Coleoptile Length .....	Short
Tillering .....	Very Good
Milling & Baking Quality ...	Acceptable
Protein .....	Good

Ratings may vary across area of adaptation.

### Disease and Pest Tolerance

Leaf Rust .....	Excellent
Stripe Rust.....	Fair
Stem Rust.....	Excellent
Wheat Streak Mosaic Virus ..	Very Good
Barley Yellow Dwarf Virus.....	Very Good
Soil-Born Mosaic Virus.....	Excellent
Leaf Blotch .....	Excellent
Tan Spot .....	Very Good
Powdery Mildew .....	Fair
Hessian Fly .....	Poor
Fusarium Head Blight.....	Fair

### Variety Protection

PVP..... Protected

Seed trading and resale by any unauthorized party is strictly prohibited by law.

### Management Notes

SY Wolverine is a short-statured winter wheat well adapted to a variety of management systems—dryland, irrigated, double-crop, dual-purpose, forage, silage, and graze out. In addition to its versatility, SY Wolverine has excellent yield potential when managed appropriately. A fungicide treatment at flag leaf is strongly encouraged to prevent performance loss due to stripe rust. Producers occasionally comment about difficulty thrashing SY Wolverine. Use caution on low pH soils that may have toxic levels of plant available aluminum. Aluminum toxicity can often be overcome by applying a phosphorus starter fertilizer.

**Note:** these agronomic assessments are updated annually by Syngenta scientists. The current values reflect each variety's relative performance within these characteristics through the 2024 crop year. Specific conditions may cause variations. These relative protection values are based on current pest and disease populations, known to shift periodically potentially changing specific evaluations. Resistance to many other diseases and pests is sensitive to environmental conditions, plant development stages and the presence and intensity of other diseases which may result in specific evaluation inconsistencies.
