

AP Olympia

Soft White Winter Wheat Variety
Power Up Yield Potential

Highlights

- New for 2024
- Consistent yield in intermediate- to high-moisture environments
- Good end-use quality with high falling number
- Excellent stripe rust tolerance

Agronomics

Maturity	Medium
Test Weight	Excellent
Height	Medium
Winter Hardiness	Excellent
Straw Strength	Good
Head Type	Awned
Planting Date	Average
Seed Size	Average
Emergence	Good
Moisture Zone	>16"

Disease and Pest Tolerance

Stripe Rust 2

Ceph Stripe 4

Barley Yellow Dwarf Virus 2

Comparison Chart Value 9.....1
Poor.....Excellent

E = Early
ME = Medium Early
M = Medium

Height:
S = Short
M = Medium
T = Tall

SBMV:
R = Resistant
S = Susceptible
I = Intermediate

Note: these agronomic assessments are made by Syngenta scientists and reflect each variety's relative performance within these characteristics though the 2025 crop year. Specific conditions may cause variations within characteristics. These relative protection values are based on current pest and disease populations and have been known to shift periodically and may cause changes in specific evaluations. Resistance to many other diseases and pests is sensitive to environmental conditions, plant development stages and the presence and intensity of other diseases which may result in specific evaluation inconsistencies. This chart is updated annually to reflect the most current trends. ©2024 Syngenta. **Some or all of the varieties may be protected under one or more of the following: Plant Variety Protection, United States Plant Patents and/or Utility Patents and may not be propagated or reproduced without authorization.** AgriPro® and the Syngenta logo are trademarks of a Syngenta Group Company.
