

AgriPro Brand Wheat Variety

# AP Tango

## Strength and Flexibility

Pedigree: Pedigree: WB-Grainfield // (AP Roadrunner / AP EXP)

### Key Strengths

- » **Excellent straw strength**
- » **Excellent tolerance to low pH soil**
- » **Very good stripe rust tolerance**

Call your AgriPro® Associate for local performance data and seed availability.

### Agronomics

Type .....	Hard Red Winter
Head Type .....	Awned
Seed Size .....	Small
Chaff Color .....	White
Herbicide Tolerance.....	None
Test Weight .....	Excellent
Straw Strength .....	Very Good
Relative Maturity.....	Early
Plant Height.....	Short
Winter Hardiness .....	Very Good
Acid Soil Tolerance .....	Excellent
Coleoptile Length .....	Medium
Tillering .....	Excellent
Milling & Baking Quality ...	Very Good
Protein .....	Good

*Ratings may vary across area of adaptation.*

### Disease and Pest Tolerance

Leaf Rust .....	Fair
Stripe Rust.....	Very Good
Stem Rust.....	Very Good
Wheat Streak Mosaic Virus ..	Good
Barley Yellow Dwarf Virus.....	NA
Soil-Born Mosaic Virus.....	Excellent
Leaf Blotch .....	Very Good
Tan Spot .....	Very Good
Powdery Mildew .....	NA
Hessian Fly .....	Fair
Fusarium Head Blight.....	Fair

### Variety Protection

PVP..... Protected  
*Seed trading and resale by any unauthorized party is strictly prohibited by law.*

### Management Notes

AP Tango is a broadly adapted, early maturing winter wheat with excellent yield and test weight performance in both dryland and irrigated production systems. Tolerant to high concentrations of aluminum—commonly found in low pH soils—AP Tango is a good choice for course, low organic matter soils. AP Tango’s excellent tolerance to stripe rust provides growers an extended fungicide treatment window in years with high disease pressure. Its short stature and strong straw guard against lodging, helping ensure an efficient harvest.

**Note:** these agronomic assessments are updated annually by Syngenta scientists. The current values reflect each variety’s relative performance within these characteristics through the 2025 crop year. Specific conditions may cause variations. These relative protection values are based on current pest and disease populations, known to shift periodically potentially changing specific evaluations. Resistance to many other diseases and pests is sensitive to environmental conditions, plant development stages and the presence and intensity of other diseases which may result in specific evaluation inconsistencies.
