Numbers in **bold type** are in the top yielding group and considered statistically similar.

Numerical ratings: Heading: 1= early; Height: 1 = short

[1] Economic return calculated by using the three-year yield average multiplied by the average grain price ($6.50/bu). (+) 8 cents per 1/5th premium over 14% protein, (-) 10 cents per 1/5 discount under 14% protein

These agronomic assessments are made by Syngenta scientists and reflect each variety's relative performance within these characteristics through the 2026 crop year. Specific conditions may cause variations within those characteristics. These relative protection values are based on current pest and disease populations. These have been known to shift periodically and may cause changes in specific evaluations. Resistance to many other diseases and pests is sensitive to environmental conditions, plant development stages and the presence and intensity of other diseases which may result in specific evaluation inconsistencies. This chart is updated annually to reflect the most current trends.

AgriPro hybrid wheat seed sold commercially contains 75-95% hybrid seed, as required by the Federal Seed Act. Plot trial data for AgriPro hybrids represents performance using seed lots with nearly 100% hybrid seed.
